

This country was founded on principles of freedom and fairness to all. Since when is fairness dependent on holding some back because others are too lazy or unable to improve. This goes along with PRICE CONTROL which is what the OIL COMPANYS and our GOVERNMENT itself is doing to us every day. We work harder today and make less in real earnings than ever before. Now you want to restrict what we can recieve for our money because others won't improve thier product to compete. We need what XM Sattelite is giving us for a fair price. I am a Truck Driver and use and need what they are making available to us for making decissions about which route to take because of weather or traffick conditions. We also need uninterupted programs to keep us alert and safe on the road. If you as the people in charge decide to control what we can recieve on our bought and paid for equipment then you are no better than the OIL COMPANYS who gouge us in every way they can. Or others as far as that goes. There is and has never been an oil shortage in this country, there has been and still is fuel production control as a way to get more money for less output. It looks like the BROADCASTERS simply want to join that bandwagon, along with the movie and music industries. Forgive me for being so long winded, but I think it all goes hand in hand with us [the AMERICAN PUBLIC] as the cash cow. I for one am fed up with it. Sincerely, Cleitus R Tyler
